b) Market Review and Future Outlook

Global Economy

In early 2009, global unemployment rates were high, the international financial system was in turmoil and world trade was diminishing. Since then, the international stock markets have recovered and the global economy got back on track, with growing world trade and declining unemployment rates.

The events of the past one and a half years have reshaped the world economy. Young and emerging economies like India and China will assume greater roles since these countries emerged as the big winners in 2009, and their global economic position has actually strengthened compared to other emerging and developed markets.

Equity Fundamentals

India's Index for Industrial Production (IIP), which was at 16.7% in January 2010 and grew to 17.6% in April 2010, increased the prospect of achieving 8.5% economic growth in 2010 - 2011. The surge in the HSBC Market Purchasing Managers' Index is suggestive of a strengthening manufacturing industry, which grew

at its fastest pace in 20 months in February 2010. It expanded for the third month in a row on account of ever expanding output and a strong flow of new orders. Improving economic conditions of select global economies have resulted in an improvement in the country's exports, which have grown for four consecutive months between November 2009 and February 2010 by 34% Year-on-Year, and Imports grew by 66% Year-on-Year for the same period, respectively.

Taking all these factors into account, Standard and Poor (S&P) raised India's rating outlook from 'Negative' to 'Stable', as it expected the country's fiscal situation to improve. They have also indicated that the country's growth projection for the Financial Year (FY) 2011-2012 was at 8%, a figure that exceeded their previous expectation.

Debt Market

In March 2010, the yield on the 10-year Government security increased by 0.81% as compared to March 2009, due to huge government borrowing and an increase in inflation levels, with reference to the same period of the previous year. The annual rate of inflation, based on monthly Wholesale Price Index (WPI), stood at 9.89% (provisional) in February 2010, as compared to 3.50% during February 2009. The liquidity stockpile i.e. Liquidity Adjustment Facility (LAF) and Market Stabilisation Scheme (MSS) surplus cash held by the centre continued to remain within comfortable levels. Net Foreign Institutional Investments (FII) in equities and debt stood at US \$30.25 Billion in FY10, as compared to an outflow of US \$9.84 Billion in FY09. The FII inflows and lower oil prices helped strengthen the rupee. It stood at 44.92 at the end of March 2010 as compared to 50.73 at the end of March 2009. Market yields have already factored a good amount of tightening next year. The net government borrowing (adjusted for maturities, MSS de-sequestering and Reserve Bank of India (RBI) Open Market Operations (OMO)) were higher than last year.

Outlook

The crucial phase of the financial crisis appears to have passed and there are indications that a global recovery is on its way. However, it appears to be a little fragile and may slow down as the impact of fiscal and monetary measures play out. Consequently, employment growth is expected to remain weak and unemployment is expected to remain high for some time. Additionally, concerns over potential downgrades of select economies could continue to impact risk assessment, capital flows and financial markets in the coming months.

The Indian economy appears to have a strong foothold on the recovery path, backed by a timely and aggressive policy response by the RBI and the Government. India's high levels of domestic consumption, balance in manufacturing and the service sectors contribution to Gross Domestic Product (GDP), with lower reliance on net exports will continue to accelerate the Indian growth story. However, the challenges to India's growth stem from factors such as need for higher investment in human and physical capital, and implementation of reforms. If the reforms suggested by the Government are executed as desired, one would continue to witness higher investment into the country which in turn would result in higher growth.

c) Operations of the Schemes:

(a) Average Assets under Management (AAUM):

During the year under review, the AAUM of the Mutual Fund stood at Rs. 81,01,762.36 lakhs as on March 31, 2010 as compared to Rs. 51,45,611.12 lakhs as on March 31, 2009.

As of March 31, 2010, the Fund comprised thirteen (13) close-ended Schemes and thirty-six (36) open-ended Schemes. The Fund also had one Fund-of-Funds Scheme having five Plans there under. During the year under review the Fund launched one open ended equity Scheme, three open ended debt Schemes, one close ended equity Scheme and four close ended debt Schemes.

With a view to rendering timely and efficient customer service, the Investment Manager of the Fund, viz., ICICI Prudential Asset Management Company Ltd.
