The funds managed by these associates and/ or the AMC may acquire a substantial portion of the Scheme. Accordingly, redemption of units held by such funds, associates and sponsors may have an adverse impact on the units of the Scheme because the timing of such redemption may impact the ability of other unit holders to redeem their units. The details of such investments of the AMC can be accessed at the following link: <https://www.icicipruamc.com/about-us/statutory-disclosures>

PART III. OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date. Investments of the Scheme shall be valued according to the valuation norms, as specified in Schedule VIII of the Regulations, or such norms as may be prescribed by SEBI from time to time and as stipulated in the valuation policy and procedures of the Fund, provided in Statement of Additional Information (SAI).

The NAV of the Scheme shall be rounded off upto four decimals

NAV of units under the Scheme shall be calculated as shown below:

NAV (Rs.) =

$$\frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No. of Units outstanding under Schemes}}$$

The NAV will be calculated as of the close of every Business Day of the respective Scheme. The valuation of the Scheme's assets and calculation of the Scheme's NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

Illustration of computation of NAV:

If the net assets of the Scheme are Rs.10,45,34,345.34 and units outstanding are 10,000,000, then the NAV per unit will be computed as follows:

$10,45,34,345.34 / 10,000,000 = \text{Rs. } 10.4534 \text{ p.u. (rounded off to four decimals)}$

For further details, such as policies with respect to computation of NAV, rounding off, valuation of investment in foreign securities, procedure in case of delay in disclosure of NAV etc., please refer to SAI.

I. Introduction

A. Definitions

Definition for the words and expressions used in the SID are available at the following link : <https://www.icicpruamc.com/news-and-media/downloads>

The words and expressions shall have the meaning as specified at the above link, unless the context otherwise requires.

B. Risk Factors

I. Standard Risk Factors: Please refer to SAI.

II. Scheme specific risk factors

The Scheme is subject to the risks described below. Some or all of these risks may adversely affect the Scheme's NAV, trading price, yield, total return and/or its ability to meet its objectives.

Passive Investments

The Scheme is a passively managed scheme. The Scheme shall endeavor to invest in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select securities or to take defensive positions in declining markets.

Portfolio Concentration Risk

To the extent that the Scheme may concentrate its investments in the securities of certain companies/ sectors, the Scheme will therefore be subject to the risks associated with such concentration. In addition, the Scheme may be exposed to higher levels of volatility and risk than would generally be the case in a more diverse fund portfolio of debt securities. Such risks may impact the Scheme to the extent that it invests in particular companies/sectors even in cases where the investment objective is more generic.

Risk associated with investing in Fixed Income and Money Market Securities

- **Market Risk/Interest Rate Risk:** The Net Asset Value (NAV) of the Scheme(s), to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- **Liquidity Risk:** The liquidity of a security may change depending on market conditions leading to changes in the liquidity premium linked to the price of the security. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio.
- **Credit Risk:** Investments in Fixed Income Securities and money market are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- **Price Risk:** Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or

decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.

- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Settlement risk:** The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Schemes’ portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses to the Plan, in case of a subsequent decline in the value of securities held in the Schemes’ portfolio.
- **Regulatory Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Scheme.
- Fixed Income Securities are subject to the risk of an issuer’s inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.

Tracking Error Risk

Factors such as the fees and expenses of the Scheme, Corporate Actions, Cash balance, changes to the Underlying Indices and regulatory policies may affect AMC’s ability to achieve close correlation with the Underlying Index of each Scheme. The Scheme’s returns may therefore deviate from those of its Underlying Index. “Tracking Error” is defined as the standard deviation of the difference between daily returns of the index and the NAV of the Scheme.

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. However, this may vary due to various reasons mentioned below or any other reasons that may arise and particularly when the markets are very volatile:

- Expenditure incurred by the Scheme.
- The funds may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or expenses or for corporate actions of securities in the index.
- Any delay experienced in the purchase or sale of securities due to illiquidity of the market, settlement and realization of sale proceeds and the registration of any securities transferred and any delays in receiving cash and resulting delays in reinvesting them.

- The underlying index reflects the prices of securities at close of business hours. However, the scheme may buy or sell the securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the exchange.
- Index Service Provider undertakes the periodical review of the scrips that comprise the underlying index and may either drop or include new securities. In such an event, the scheme will endeavor to reallocate its portfolio but the available investment/disinvestment opportunities may not permit precise mirroring of the Index.
- The potential for trades to fail which may result in the Scheme not having acquired securities at a price necessary to track the index.
- The holding of a cash position (0-5% of the Net Assets to meet the redemptions and other liquidity requirements) and accrued income prior to distribution and accrued expenses.
- Corporate actions such as rights, merger, change in constituents etc.
- Rounding off quantity of securities underlying the index.
- Disinvestments to meet redemptions, recurring expenses, IDCW payouts etc

Risk associated with investing in units of mutual funds

The scheme may make investments in units of mutual funds. Investments in schemes of mutual funds are subject to market risks and there is no assurance or guarantee that the objectives of the scheme will be achieved. Further, any investment in mutual funds is also subject to risk factors outlined in the offer document of the mutual fund and an adverse performance of a mutual fund scheme in which the scheme has made investments could adversely impact the scheme's performance and NAV of the scheme.

Risk factors associated with creation of segregated portfolios

1. Liquidity risk – A segregated portfolio is created when a credit event occurs at an issuer level in the scheme. This may reduce the liquidity of the security issued by the said issuer, as demand for this security may reduce. This is also further accentuated by the lack of secondary market liquidity for corporate papers in India. As per SEBI norms, the scheme is to be closed for redemption and subscriptions until the segregated portfolio is created, running the risk of investors being unable to redeem their investments. However, it may be noted that the proposed segregated portfolio is required to be formed within one day from the occurrence of the credit event.

Investors may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, AMC shall list the units of the segregated portfolio on a recognized stock exchange within 10 business days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. There is no assurance that a deep secondary market will develop for units of segregated portfolio listed on the stock exchange. This could limit the ability of the investors to resell them.

2. Valuation risk - The valuation of the securities in the segregated portfolio is required to be carried out in line with the applicable SEBI guidelines. However, it may be difficult to ascertain the fair value of the securities due to absence of an active secondary market and difficulty to price in qualitative factors.

Risks associated with investing in Tri Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments.

CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall".

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower.

Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

Risks related to Index Schemes

- Performance of the underlying Index will have a direct bearing on the performance of the Scheme. In the event when the index is dissolved or is withdrawn, the Trustee reserves a right to modify the Scheme so as to track a different and suitable index and appropriate intimation will be sent to the unitholders of the Scheme. In such a case, the investment pattern will be modified suitably to match the composition of the securities that are included in the new index to be tracked and the Scheme will be subject to tracking errors during the intervening period.

- **Currency Risk:** Companies within the index may have exposure to foreign currencies through international sales, imports, or foreign exchange contracts. Currency fluctuations can impact the earnings and cash flows of these companies, affecting the performance of the scheme.
- **Regulatory and Environmental Risk:** Companies within the index may be subjected to regulatory requirements related to environmental protection, safety standards, labor practices, and land acquisition. Changes in regulations or compliance issues can affect production costs, supply chains, and profitability, impacting the scheme's performance.
- **Technological Disruption:** Advances in technology, such as automation, robotics, and renewable energy, can disrupt supply chains, affecting the competitiveness and profitability of the companies held in the index which will have a direct bearing on the performance of the Scheme.
- **Corporate Governance Risks:** Weak corporate governance practices, such as inadequate board oversight, conflicts of interest, or related-party transactions, can undermine shareholder value and increase the risk of fraud, mismanagement, or regulatory scrutiny, affecting the scheme's returns.

C. Risk mitigation strategies

The Scheme by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in various instruments. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Scheme has identified following risks of investing in equity and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risks associated with Debt investment	
Risks and description	Risk mitigation strategy
<p>Market Risk/ Interest Rate Risk</p> <p>As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.</p>	<p>Being a passively managed scheme, it will endeavor to invest in the securities included in its Underlying Index.</p>
<p>Liquidity or Marketability Risk</p> <p>This refers to the ease with which a security can be sold at or near to its valuation yield-</p>	<p>The Scheme will try to maintain a proper asset-liability match to ensure</p>

to-maturity (YTM).	redemption payments are made on time and not affected by illiquidity of the underlying securities.
Credit Risk Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security).	Being a passively managed scheme, it will endeavor to invest in the securities included in its Underlying Index.
<u>Tracking Error risk (Volatility/ Concentration risk):</u> The performance of the Scheme may not commensurate with the performance of the underlying Index viz. CRISIL-IBX Financial Services 3-6 Months Debt Index on any given day or over any given period.	<u>Tracking Error risk (Volatility/ Concentration risk):</u> Over a short to medium period, the Scheme may carry the risk of variance between portfolio composition and Benchmark. The objectives of the Scheme is to closely track the performance of the Underlying Index over the same period, subject to tracking error. The Scheme would endeavor to maintain a low tracking error by actively aligning the portfolio in line with the Index.

II. Information about the scheme

POSITION OF DEBT MARKET IN INDIA

There are three main segments in the debt markets in India, viz., Government Securities,

Public Sector Units (PSU) bonds, and corporate securities. A bulk of the debt market consists of Government Securities. Other instruments available currently include Corporate Debentures, Bonds issued by Financial Institutions, Commercial Paper, Certificates of Deposits and Securitized Debt. Securities in the Debt market typically vary based on their tenure and rating. Government Securities have tenures from one year to thirty years whereas the maturity period of the Corporate Debt now goes up to sixty years and more (perpetual). Perpetual bonds are now issued by banks as well. Securities may be both listed and unlisted and there is increasing trend of securities of maturities of over one-year being listed by issuers.

The yields and liquidity on various securities as on February 28, 2025 are as under:

Issuer	Instrument	Maturity	Yields (%)	Liquidity
GOI	Treasury Bill	91 Days	6.44%	High
GOI	Treasury Bill	364 Days	6.53%	High
GOI	Short Dated	1-3 Years	6.57% - 6.59%	High
GOI	Medium Dated	3-5 Years	6.59% - 6.68%	High
GOI	Long Dated	5-10 Years	6.68% - 6.72%	High

D. INDEX METHODOLOGY

Information on the Index: CRISIL-IBX Financial Services 3-6 Months Debt Index is a constant maturity index that seeks to track the performance of Commercial Papers (CPs), Certificates of Deposit (CDs) & corporate bond securities maturing within 3 to 6 months from the date of inclusion in the index.

Eligibility criteria

- Issuers in the financial services sector with long term conservative rating of AAA with a minimum amount outstanding of Rs. 1500 crores and having securities (CPs, CDs & Bonds) with residual maturity of 3 to 6 months.
- Minimum security level amount outstanding of Rs. 100 crores.
- Only listed issuers shall be included in the index. An issuer will be considered to be listed if at least one security (CPs or Bonds) of such issuer is listed as evaluated at the inception date of the index. CDs are not listed on the exchanges, and hence all CDs are considered eligible if they meet the remaining criteria.

Securities Selection Methodology

AAA	<p>Issuer Selection:</p> <ul style="list-style-type: none"> • All issuers qualifying the eligibility criteria mentioned above will form a part of universe. • Up to 20 traded issuers from the universe will be ranked and selected based on liquidity. If less than 8 issuers are available, then select remaining issuers (to bring the count to 8) based on the highest amount outstanding from the universe of outstanding securities as evaluated at the inception date of the index. If the number of issuers is still below 8, then all such eligible issuers with securities maturing in the 3 to 6 months residual maturity period will be shortlisted. Count of 8 issuers will be ensured by relaxing
------------	--

amount outstanding criteria first and then the residual maturity criteria i.e., highest amount outstanding issuers or highest residual maturity of issuers will be selected respectively from the outstanding data.

Security Selection:

1. For each selected issuer, the security (CPs/CDs/Bonds) with highest residual maturity maturing in the 3 to 6 months period will be selected from the eligible universe. The selected security must have a minimum amount outstanding of Rs. 100 crores.

Weighing Approach

1. Weights to the issuers will be divided equally as on the base date of the index subject to issuer cap and group cap. Since it's a sectoral index sector caps are not applicable.
2. Issuers weights should not exceed 15% for AAA rated issuers. Group cap of 25% will be ensured.
3. When any issuer is excluded, the weight of that issuer will be redistributed proportionally amongst the rest of the issuers of the index, subject to issuer & group cap.

Rating Change Treatment:

- In case any issuer gets downgraded below AAA, such issuers shall be excluded from the index within the next 5 working days. In that case, the weight of that issuer will be redistributed proportionally in rest of the issuers of the index, subject to issuer cap & group cap. In case of less than 8 issuers are present, then new issuers will be added (to bring the count to 8) from the last reviewed working data as per above mentioned issuer selection criteria at inception.

Treatment of existing issuers:

- The eligibility criteria and process for issuer selection will be repeated. Existing issuers will be removed if they fail to qualify on the basis of the criteria and process. The objective of such reconstitution is to maintain the liquidity and duration profile of the index.

Weight reset frequency:

- Quarterly (January, April, July, October).
- The weights of securities/issuer will float based on the price movement and will be reset to equal weight during the quarterly review.

Reconstitution/Rebalancing

- The same process for issuer selection would be repeated as that followed at inception.

Reconstitution frequency

- Quarterly (January, April, July, October)
