- Stock lending up to 20% of the net assets.
- Structured Obligations up to 10% of the net assets.

No investment management fees shall be charged for investing in other Schemes of the Fund or in the Schemes of any other mutual fund.

The Cumulative Gross Exposure across Equity, Debt, Preference Shares and REITs and INVITs and such other securities/assets as may be permitted by the Board from time to time should not exceed 100% of the net assets of the scheme.

In the event of asset allocation falling outside the limits specified in the asset allocation table, the fund manager will review and rebalance the same within 30 days from the date of such deviation. Further, in case the portfolio is not rebalanced within the period of 30 days, justification for the same shall be placed before the internal investment committee and reasons for the same shall be recorded in writing. The internal investment committee shall then decide on the course of action.

Though every endeavor will be made to achieve the objectives of the Scheme, the AMC/Sponsors/Trustees do not guarantee that the investment objectives of the Scheme will be achieved.

It may be noted that no prior intimation/indication would be given to investors when the composition/asset allocation pattern under the scheme undergo changes within the permitted band as indicated above for short term and for defensive considerations owing to changes in factors this could arise on account of defensive considerations, owing to factors such as market conditions, market opportunities, applicable regulations and political and economic factors. or for changes due to defensive positioning of the portfolio with a view to protect the interest of the unit holders on a temporary basis. In the event of asset allocation falling outside the limits specified in the asset allocation table, the fund manager will review and rebalance the same within 30 days from the date of such deviation. Further, in case the portfolio is not rebalanced within the period of 30 days, justification for the same shall be placed before the internal investment committee and reasons for the same shall be recorded in writing. The internal investment committee shall then decide on the course of action. The investors/unit holders can ascertain details of asset allocation of the scheme as on the last date of each month on AMC's website at www.icicipruamc.com that will display the asset allocation of the scheme as on the given day.

Considering the inherent characteristics of the Scheme, equity positions would have to built-up gradually and also sold off gradually. This would necessarily entail having large cash position before the portfolio is fully invested and during periods when equity positions are being sold off to book profits/losses or to meet redemption needs. Investors may note that securities, which endeavor to provide higher returns typically, display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments.

The Margin may be placed in the form of such securities / instruments / deposits as may be permitted/eligible to be placed as margin from the assets of the Scheme. The securities / instruments / deposits so placed as margin shall be classified under the applicable category of assets for the purposes of asset allocation.

The securities mentioned in the asset allocation pattern could be privately placed or unsecured. The securities may be acquired through secondary market purchases, Initial Public Offering (IPO), other public offers, Private Placement, right offers (including renunciation) and negotiated deals.

Change in Investment Pattern

Subject to the Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. Though every endeavor will be made to achieve the objectives of the Scheme, the AMC/Sponsors/Trustee do not guarantee that the investment objectives of the Scheme will be achieved.

Provided further and subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be effected only in accordance with the provisions of sub regulation (15A) of Regulation 18 of the Regulations, as detailed later in this document.

INVESTMENT STRATEGY:

Equities: The Scheme shall predominately invest in equity & equity related securities across market capitalisation. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the Investment team at the AMC. The following are the broad parameters/factors that shall be considered while building the portfolio of companies.

- a) business and economic fundamentals driven by in-depth research techniques
- b) employing strong stock selection
- c) liquidity/risk considerations
- d) long term growth prospects
- e) valuation parameters

The scheme may also invest in other equity and equity related securities.

Fixed Income securities

The Scheme may also invest in Debt and Money Market Securities/Instruments (Money Market securities include cash and cash equivalents). The Scheme

aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio. With the aim of controlling risks rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Risk Management Team of the AMC. The credit evaluation includes a study of the operating environment of the issuer, the short as well as long-term financial health of the issuer. Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC may consider the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of rating agencies.

The Scheme may invest in securitised debt.

The Scheme may undertake repo transactions in corporate debt securities in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates.

The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The Scheme may also invest a part of its corpus in American Depository Receipts (ADRs), Global Depository Receipts (GDRs), foreign securities, Investments through primary market such as IPOs, securities received through corporate actions, private placements etc., bonds and mutual funds and such other instruments as may be allowed under the Regulations from time to time. The Scheme may engage in Stock Lending activities. The Scheme may invest in derivatives such as Futures & Options and such other derivative instruments like Stock/ Index Futures, Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced and permitted by SEBI from time to time, subject to approval from SEBI as required. The Scheme may invest in derivative for the purpose of hedging, portfolio balancing and other purposes as may be permitted under the Regulations, including covered call. Hedging using Interest Rate Futures could be perfect or imperfect, subject to applicable regulations.

The Scheme can invest in preference shares and units of REITs and INvITs.

Further, the Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments. For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.

Portfolio Turnover

Portfolio Turnover is defined as the lower of purchases and sales after reducing all subscriptions and redemptions and derivative transactions there from and calculated as a percentage of the average assets under management of the Scheme during a specified period of time

The AMC's portfolio management style is conducive to a low portfolio turnover rate. However, the AMC will take advantage of the opportunities that present themselves from time to time because of the inefficiencies in the securities markets. The AMC will endeavour to balance the increased cost on account of higher portfolio turnover with the benefits derived there from.

RISK PROFILE OF THE SCHEME:

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme Specific Risk Factors summarised below.

Scheme Specific Risk Factors and Risk Management Strategies:

1. Investing in Equities

- Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Schemes to make intended securities purchases due to settlement problems could cause the Schemes to miss certain investment opportunities.

- The value of the Schemes' investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Schemes may fluctuate and can go up or down.
- The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.
- Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the schemes are vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by schemes. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the schemes may be adversely affected due to such factors.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Schemes' investments is inherently restricted by trading volumes in the securities in which it invests.
- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk. Within the Regulatory limits, the AMC may choose to invest in unlisted securities.
- Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the schemes may get affected if there is a change in the said trend. There can be no assurance that such historical trends will continue.
- In case of abnormal circumstances it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However fund will aim at taking exposure only into liquid stocks where there will be minimal risk to square off the transaction. The Schemes investing in foreign securities will be exposed to settlement risk, as different countries have different settlement periods.
- The schemes are also vulnerable to movements in the prices of securities invested by the schemes which again could have a material bearing on the overall returns from the schemes. These stocks, at times, may be relatively less liquid as compared to growth stocks.

Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Schemes or business prospects of the Company in any particular sector.

2. Risks associated if investment made in small/mid cap companies:

While small/mid cap stocks give an opportunity to go beyond the usual large cap stocks and present possible higher capital appreciation, it is important to note that small/mid cap stocks can be riskier and more volatile on a relative basis.

Small/Midcap companies carry large amount of liquidity risk compared to the large cap companies, as the ability to sell is limited by overall trading volume in the securities, which it invests.

3. Risk factors associated with investing in Preference Shares

- Credit Risk - Investments in Preference Shares are subject to the risk of an issuer's inability to meet dividend and redemption by the issuer. Further, for non-cumulative preference shares, issuer also has an option to not pay dividends on preference shares in case of inadequate profits in any year.
- Liquidity Risk - Preference shares lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold.

- Unsecured in nature - Preference shares are unsecured in nature and rank lower than secured and unsecured debt in hierarchy of payments in case of liquidation. Thus, there is significant risk of capital erosion in case the company goes into liquidation.
- Market Risk – The schemes will be vulnerable to movements in the prices of securities invested by the schemes which could have a material bearing on the overall returns from the schemes.

4. Investing in Fixed Income Securities

- **Market Risk:** The Net Asset Value (NAV) of the Scheme(s), to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- **Liquidity Risk:** Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold.
- **Credit Risk:** Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- **Price Risk:** Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Settlement risk:** The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Schemes' portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses to the Plan, in case of a subsequent decline in the value of securities held in the Schemes' portfolio
- **Regulatory Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Scheme.
- **Risks associated with investment in unlisted securities:** Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
- **Fixed Income Securities:** Fixed Income Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- Different types of fixed income securities in which the Scheme(s) would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme(s) risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of

risk of the portfolio.

- As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.
- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.
- The Scheme(s) at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- Scheme's performance may differ from the benchmark index to the extent of the investments held in the debt segment, as per the investment pattern indicated under normal circumstances.
- Investment in unrated instruments may involve a risk of default or decline in market value higher than rated instruments due to adverse economic and issuer-specific developments. Such investments display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values for unrated investments tends to be more volatile and such securities tend to be less liquid than rated debt securities"

5. Risks associated with investment in ADR/GDR/Foreign Securities:

It is AMC's belief that the investment in ADRs/GDRs/overseas securities offers new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the schemes. Since the Schemes would invest only partially in ADRs/GDRs/overseas securities, there may not be readily available and widely accepted benchmarks to measure performance of the Schemes. To manage risks associated with foreign currency and interest rate exposure, the Scheme may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/RBI from time to time.

To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of the other restrictions on investment.

Offshore investments will be made subject to any/all approvals, conditions thereof as may be stipulated by SEBI/RBI and provided such investments do not result in expenses to the Scheme in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing. The Scheme may, where necessary, appoint other intermediaries of repute as advisors, custodian/sub-custodians etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, fees of appointed advisors and sub-managers, transaction costs, and overseas regulatory costs.

Investors are requested to note that the costs associated with overseas investments like advisory fees (other than those expenses permissible under regulation 52 of SEBI Regulations) would not be borne by the scheme.

6. Risks associated with Investing in Derivatives:

The Schemes may use various derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include the risk of mis-pricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

The Fund may use derivatives instruments like Stock /Index Futures or other derivative instruments for the purpose of hedging and portfolio balancing, as

permitted under the Regulations and guidelines. Usage of derivatives will expose the Schemes to certain risks inherent to such derivatives.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Also, the market for derivative instruments is nascent in India.

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The specific risk factors arising out of a derivative strategy used by the Fund Manager may be as below:

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place
- Basis Risk: This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying asset being hedged
- Exchanges could raise the initial margin, variation margin or other forms of margin on derivative contracts, impose one sided margins or insist that margins be placed in cash. All of these might force positions to be unwound at a loss, and might materially impact returns.

7. Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities:

- The risks factors stated below for the Structured Obligations & Credit Enhancement are in addition to the risk factors associated with debt instruments.
- Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer
- Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.
- Credit Risk: The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to ability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

• Risks associated with Repo Transactions in Corporate Debt Securities

Lending transactions:

The scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However in repo lending transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk may be further mitigated through over-collateralization (the value of the collateral being more than the repo amount). Further, the liquidation of underlying securities in case of counterparty default would depend on liquidity of the securities and market conditions at that time. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation and over-collateralization to cushion the impact of market risk on sale of underlying security.

Borrowing transactions:

In the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin). This risk is normally mitigated by better cash flow planning to take care of such repayments. Further, there is also a Credit Risk that the Counterparty may fail to return the security or Interest received on due date. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation.

Investors may please refer SID of the scheme for complete risk factors.

Risk management strategies: The Scheme by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt and equity markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Scheme has identified following risks of investing in equity and debt and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risks associated with Equity investment	
Risks and description	Risk mitigation strategy
<p>Concentration Risk Concentration risk represents the probability of loss arising from heavily lopsided exposure to a particular group of sectors or securities.</p>	<p>The Scheme will try and mitigate this risk by investing in sufficiently large number of companies (and across sectors) so as to maintain optimum diversification and keep stock-specific concentration risk relatively low.</p>
<p>Market Risk The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme.</p>	<p>Market risk is a risk which is inherent to an equity scheme. The Scheme may use derivatives to limit this risk.</p>
<p>Liquidity risk The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.</p>	<p>As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.</p>
<p>Derivatives Risk As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds.</p>	<p>The Scheme may invest in derivative for the purpose of hedging, portfolio balancing and other purposes as may be permitted under the Regulations. Derivatives may be used in the form of Index Options, Index Futures, Stock Options and Stock Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. No OTC contracts will be entered into.</p>
<p>Currency Risk The Scheme may invest in foreign securities as permitted by the concerned regulatory authorities in India. Since the assets may be invested in securities denominated in foreign currency, the INR equivalent of the net assets, distributions and</p>	<p>The scheme subject to applicable regulations shall have the option to enter into forward contracts for the purposes of hedging against the foreign exchange fluctuations. The Schemes may employ various measures (as permitted by SEBI/RBI) including but not restricted to currency hedging (such as currency</p>

All currency derivatives trade, if any will be done only through the stock exchange platform.

Risks associated with Debt investment

Risks and description	Risk mitigation strategy
Market Risk/ Interest Rate Risk As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	The scheme will undertake the active portfolio management as per the investment objective to reduce the market risk. In a rising interest rates scenario the scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.
Liquidity or Marketability Risk This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).	The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The Scheme will however, endeavour to minimize liquidity risk by investing in securities having a liquid market.
Credit Risk Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security).	Management analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken.
Reinvestment Risk This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.

Derivatives Risk As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.	The Scheme may invest in derivative for the purpose of hedging, portfolio balancing and other purposes as may be permitted under the Regulations. Interest Rate Swaps will be done with approved counter parties under pre-approved ISDA agreements. Interest rate swaps and other derivative instruments will be used as per applicable regulatory guidelines.
Currency Risk The Scheme may invest in foreign securities as permitted by the concerned regulatory authorities in India. Since the assets may be invested in securities denominated in foreign currency, the INR equivalent of the net assets, distributions and income may be adversely affected by changes / fluctuations in the value of the foreign currencies relative to the INR.	The scheme subject to applicable regulations, shall have the option to enter into forward contracts for the purposes of hedging against the foreign exchange fluctuations.
